

# Sample 2

## Criterion 2

$$\frac{1 \text{ FT}}{0.30 \text{ m}} = \frac{110.21 \text{ Ft}}{X \text{ m}} = \frac{33.06 \text{ m}}{0.30}$$

$$\begin{aligned}
 a^2 + b^2 &= c^2 \\
 33.06^2 + 12.17^2 & \\
 1092.96 + 148.10 & \\
 &= 1241.06 \\
 &= \sqrt{1241.06} \\
 &= \frac{35.22 \text{ m}}{0.30} = 117.40 \text{ Ft}
 \end{aligned}$$

## Criterion 1

$$\begin{aligned}
 a^2 + b^2 &= c^2 \\
 110.21^2 + 33.06^2 & \\
 12146.24 + 1092.96 & \\
 &= 13239.2 \\
 &= \sqrt{13239.2} \\
 &= 115.06 \text{ Ft}
 \end{aligned}$$

$$\begin{aligned}
 29 \times 2 &= 58 \text{ poles} \\
 &\times 2 \\
 &= \underline{\$116} \text{ All posts.}
 \end{aligned}$$

## Criterion 3

$$\begin{aligned}
 \frac{116.6 \text{ Ft}}{4} &= 29 \text{ panels} \\
 &\times \\
 &= \underline{\$4350} \text{ all panels}
 \end{aligned}$$

## Criterion 4

$$4350 + 116 = \underline{4466} + 400 = 4866 \div 2 = \underline{2433}$$

\$ 10 per hour, 5 business days, 8 hours - \$80 x 5 = 400

Mr. Akers	Ms. Burkin	Worker
\$2433	\$2433	\$400 gets paid

## Criterion 5

I think they should both pay \$2433, because they both need a fence. It's also a reasonable cost.

**Mathematics 10-3**

**Good Fences Make Good Neighbours**

**Student** \_\_\_\_\_ **Date** \_\_\_\_\_

Criteria	Description of Criteria	Yes	Not Yet	Teacher Comment
<b>Apply Pythagorean theorem</b> (Geometry 2)  [C, CN, PS, V]	The student has proficiently applied the theorem to solve the problem.			Note that the student used pythagorean theorem correctly twice, but the numbers used the second time are a blend of meters and feet, which might indicate a misunderstanding about conversions and consistency of units.
<b>Convert between SI units and imperial units</b> (Measurement 1, 2, 3)  [C, CN, ME, PS, V]	The student has accurately applied conversion factors to solve the problem and present the solution.			The student's conversion of 110.21 feet to meters is incorrect.

Level Criteria	4 Excellent	3 Proficient	2 Adequate	1 Limited *	Insufficient/ Blank *
<b>Calculate cost of fence materials</b> (Number 1)  [CN, ME, PS, R]	Provides a <b>perceptive</b> examination of pertinent factors in determining the total cost of fence.	Provides an <b>applicable</b> examination of pertinent factors in determining the total cost of fence.  The student has made an error in determining the number of posts required by assuming each panel requires 2 posts.	Provides a <b>basic</b> examination of pertinent factors in determining the total cost of fence.	<b>Unable</b> to determine the total cost of fence.	
<b>Justify cost of labour</b> (Number 2)  [C, CN, R, T]	Provides a <b>comprehensive</b> justification for the total cost of labour for building the fence.  The student has considered how long the fence would take to build, a reasonable hourly rate, and determined the labour cost.	Provides a <b>substantial</b> justification for the total cost of labour for building the fence.	Provides a <b>simplistic</b> justification for the total cost of labour for building the fence.	Provides a <b>weak</b> justification for the total cost of labour for building the fence.	

**Mathematics 10-3**

**Good Fences Make Good Neighbours**

<p><b>Calculate cost of fence per neighbour</b> (Measurement 1,2,3 Number 1)</p> <p>[C, CN, ME, PS, R, V]</p>	<p>Proposes an <b>insightful</b> proposal for each neighbour's proportionate cost to build the fence.</p>	<p>Proposes a <b>thoughtful</b> proposal for each neighbour's proportionate cost to build the fence.</p>	<p>Proposes a <b>reasonable</b> proposal for each neighbour's proportionate cost to build the fence.</p> <p>The cost is split evenly, without consideration for labour. Despite the thoughtful calculation of the labour cost, this student didn't show how to incorporate that into the share of cost.</p>	<p>Proposes a <b>questionable</b> proposal for each neighbour's proportionate cost to build the fence.</p>
